SOIL CONDITIONS

Due to grading and construction, the areas to be treated are mainly subsoil and substrata. Fertility is low and the physical characteristics of the exposed material are unfavorable to all but the most handy plants.

TREATMENT SPECIFICATIONS

A.) **Hydraulic Seeding Equipment (Hydroseeding):** When hydraulic seeding and fertilizing equipment is used, no grading and shaping or seedbed preparation will be required. The fertilizer, seed and wood cellulose fiber mulch will be mixed with water and applied in a slurry. All slurry ingredients must be combined to form a homogeneous mixture, and spread uniformly over the area, leaving about 25% of the ground surface exposed.

B.) **Conventional Seeding Equipment (Hand seeding):** Grade, shape and smooth where needed to provide for safe equipment operation at seeding time and for maintenance purposes. The lime and fertilizer in dry form will be spread uniformly over the area immediately before seedbed preparation. A seedbed will be done with cultipacker-seeder, drill, rotary seeder or other mechanical or hand seeder. Seed will be distributed uniformly over a freshly prepared seedbed and covered lightly. Within 24 hours after seeding, straw or hay mulch will be spread with blower-type mulch equipment or by hand and achored immediatedly after is spread. A disk harrow with the disk set straight or a special packer disk may be used to press the mulch into the soil

PREPARATION APPLICATION RATES

INSTALLATION

DIVERT RUNOFF FROM UNDISTURBED AREAS AWAY FROM THE BASIN (REFERENCE DETAIL 04000.09 "STANDARD DIVERSION BERM") DELAY CLEANING POND AREA UNTIL DAM IS IN PLACE.
EXCAVATE FOUNDATION FOR APRON AND USE IT AS A TEMPORARY SEDIMENT BASIN DURING CONSTRUCTION OF DAM.
CLEAR AND GRUB AREA UNDER DAM, REMOVING ALL ROOT MATTER AND OTHER OBJECTIONABLE MATERIAL. GRADE EARTH ABUTMENTS NO STEEPER THAN 1:1. DISPOSE OF MATERIAL IN APPROVED LOCATION.
IF CUTOFF TRENCH IS REQUIRED, EXCAVATE AT CENTER LINE OF DAM EXTENDING ALL THE WAY UP EARTH ABUTMENTS.

PROTECTION FROM PIPING

THE ENTIRE FOUNDATION INCLUDING BOTH EARTH ABUTMENTS MUST BE COVERED BY FILTER FABRIC, OVERLAP 1 FT AT ALL JOINTS, UPSTREAM STRIPS OVER DOWNSTREAM STRIP (SEE CROSS SECTION).

SMOOTH THE FOUNDATION AREA BEFORE PLACING FILTER FABRIC. BE CAREFUL PLACING ROCK ON FABRIC, IT MAY BE HELPFUL TO PLACE A 4–INCH LAYER OF SAND OVER FABRIC BEFORE PLACING ROCK.

EMBANKMENT AND POOL

CONSTRUCT EMBANKMENT TO DIMENSIONS SHOWN ON PLANS, USE WELL GRADED HARD, ANGULAR, WEATHER–RESISTANT ROCK. ABUTMENTS MUST BE AT LEAST 2 FT HIGHER THAN THE SPILLWAY CREST AND AT LEAST 1 FT HIGHER THAN THE DOWNSTREAM FACE OF DAM AT ALL POINTS. (SEE PLAN)

DIVERT SEDIMENT–LADEN FLOW TO UPPER END OF BASIN.

SET MARKER STAKE TO INDICATE CLEAN OUT ELEVATION WHERE SEDIMENT POOL IS 50% FULL.

STABILIZE ALL DISTURBED AREAS EXCEPT THE LOWER ONE–HALF OF SEDIMENT POOL AS SHOWN IN THE VEGETATION PLAN.

SAFETY

SEDIMENT BASINS THAT IMPOUND WATER ARE HAZARDOUS. BASINS SHOULD BE DEWATERED BETWEEN STORMS. AVOID STEEP SLOPES. FENCES WITH WARNING SIGNS MAY BE NECESSARY IF TRESPASSING IS LIKELY. STATE AND LOCAL REQUIREMENTS MUST BE FOLLOWED.
